
Cautionary Note:

The drill results presented herein were collected prior to the Company's involvement and have not been verified by a Qualified Person on behalf of Skeena. The historical drill intercepts quoted represent core lengths, and there has been insufficient exploration to date to indicate whether or not they may represent the true thicknesses of the mineralized intervals. Drill hole traces may be projected up to 12.5m from either side of the cross section. There has also been insufficient exploration to define a mineral resource, and it is uncertain if further exploration will result in the target being delineated as a mineral resource. No exploration or operational diamond drill core remain at Snip and the mine site and all openings have been closed and re-claimed and the mill removed. The information presented herein is for historic perspective and information purposes.
